True transparent proxy mode is best suited for use in which type of environment?

A. New networks where infrastructure is not yet defined
B. Flexible environments where you can easily change the IP addressing scheme
C. Small office to home office environments
D. Environments where you cannot change the IP addressing scheme

Answer: B

Explanation:
"Because blocking is not guaranteed to succeed in offline mode, this mode is best used during the evaluation and planning phase, early in implementation. Reverse proxy is the most popular operating mode. It can rewrite URLs, offload TLS, load balance, and apply NAT. For very large MSSP, true transparent mode has a significant advantage. You can drop it in without changing any schemes of limited IPv4 space–in transparent mode, you don't need to give IP addresses to the network interfaces on FortiWeb."
