E. Online Processing

#### Explanation: Transaction Processing Mode

You can set processing control globally for all transactions or you can choose different options for each type of transaction. You establish the method of transaction processing by choosing one of the following options when you set up your TP:INV Transaction Processing Mode profile:

On-line processing

Processes transactions while you wait and returns control to you once it finishes.

Background processing

Returns control immediately to you. With this option, Oracle Inventory processes transactions on a periodic basis via the Inventory Transaction Manager.

Immediate concurrent processing

Spawns a concurrent process when you commit the transaction and returns control immediately to you, allowing you to continue working.

Form level processing

Processes transactions using the processing control option you choose for that particular type of transaction. You must also set the Inventory profile options for Inter-Organization Transfer, Miscellaneous Issue and Receipt, Receive Customer Return, Return to Customer, and Transfer Between Subinventories. If you are using Oracle Work-in-Process, you must set the WIP profile options Completion Material Processing, Completion Transaction Form, Material Transaction Form, Move Transaction, Operation Backflush Setup, and Shop Floor Processing. **Explanation:** [https://docs.oracle.com/cloud/farel12/scmcs\\_gs/FAMML/FAMML1153520.htm#FAMML1153513](https://docs.oracle.com/cloud/farel12/scmcs_gs/FAMML/FAMML1153520.htm#FAMML1153513) Warehouse Operations Key Performance Indicators: Explained

Key performance indicators (KPIs) measure how well an organization or individual performs an operational, tactical, or strategic activity that is critical for the current and future success of the organization.

The Warehouse Operations Dashboard contains the following KPIs: Inventory Value

Hit or Miss Accuracy Exact Matches Rate Inventory Value

The Inventory Value KPI shows the total value of inventory owned by your organization. The KPI indicates whether the material is physically available in the warehouse or if the material is in transit. The KPI report enables you to compare the inventory value for a selected time period with the prior year's inventory value for that same time period. You can also compare inventory value by inventory categories.

Hit or Miss Accuracy

The Hit or Miss Accuracy KPI shows the percentage of the cycle count that falls within the hit and miss tolerances of a total cycle count. This KPI provides the rate of hits during the cycle counting process. The KPI report enables you to compare the hit or miss accuracy for a selected time period with the prior year's hit or miss accuracy for that same time period.

Exact Matches Rate

The Exact Matches Rate KPI shows the exact match entries as a percentage of the total cycle count entries. An exact match entry is an entry where the counted quantity entered is the same as the system quantity. The rate of exact match entries obtained during the cycle count is called Exact Matches Rate. The KPI report enables you to compare the exact matches rate for a selected time period with the prior year's exact matches rate for that same time period.
