Testers report that the ratings are not updated when the code is run.

You need to implement the code to ensure that ratings are updated in the collection. You have the following class:

```
class Book
{
    string Name;
    string Rating;

    public Book(Book refBook)
    {
        Name = refBook.Name;
        Rating = refBook.Rating;
    }
}
```

How should you complete the code? To answer, drag the appropriate code segments to the correct locations. Each code segment may be used once, more than once, or not at all. You may need to drag the split bar between panes or scroll to view content.

NOTE: Each correct selection is worth one point

The screenshot shows an exam question interface. On the left, there are four code segments and a section titled "Second code segments" with three more segments. On the right, there is an "Answer Area" with a code editor. The code in the editor is as follows:

```
using (ITransaction tx = StateManager.CreateTransaction()) {
    ConditionalValue<Book> currentBook = await m_dic.TryGetValueAsync(tx, isbn)
    if (currentBook.HasValue) {
        first code segment
        second code segment
        await tx.CommitAsync();
    }
}
```

The "first code segment" and "second code segment" are indicated by dashed boxes in the code editor. The "first code segment" is the line: `Book updatedBook = new Book(currentBook);` and the "second code segment" is the line: `updatedBook.Rating = currentBook.Rating++;`

- A. Mastered
- B. Not Mastered

Answer: A

Explanation:

This screenshot is identical to the one above, but with the correct answer highlighted. In the "Answer Area", the code segment `Book updatedBook = new Book(currentBook);` is highlighted with a red dashed box, indicating it is the correct answer for the first code segment.
